

Comparison of Connectivity

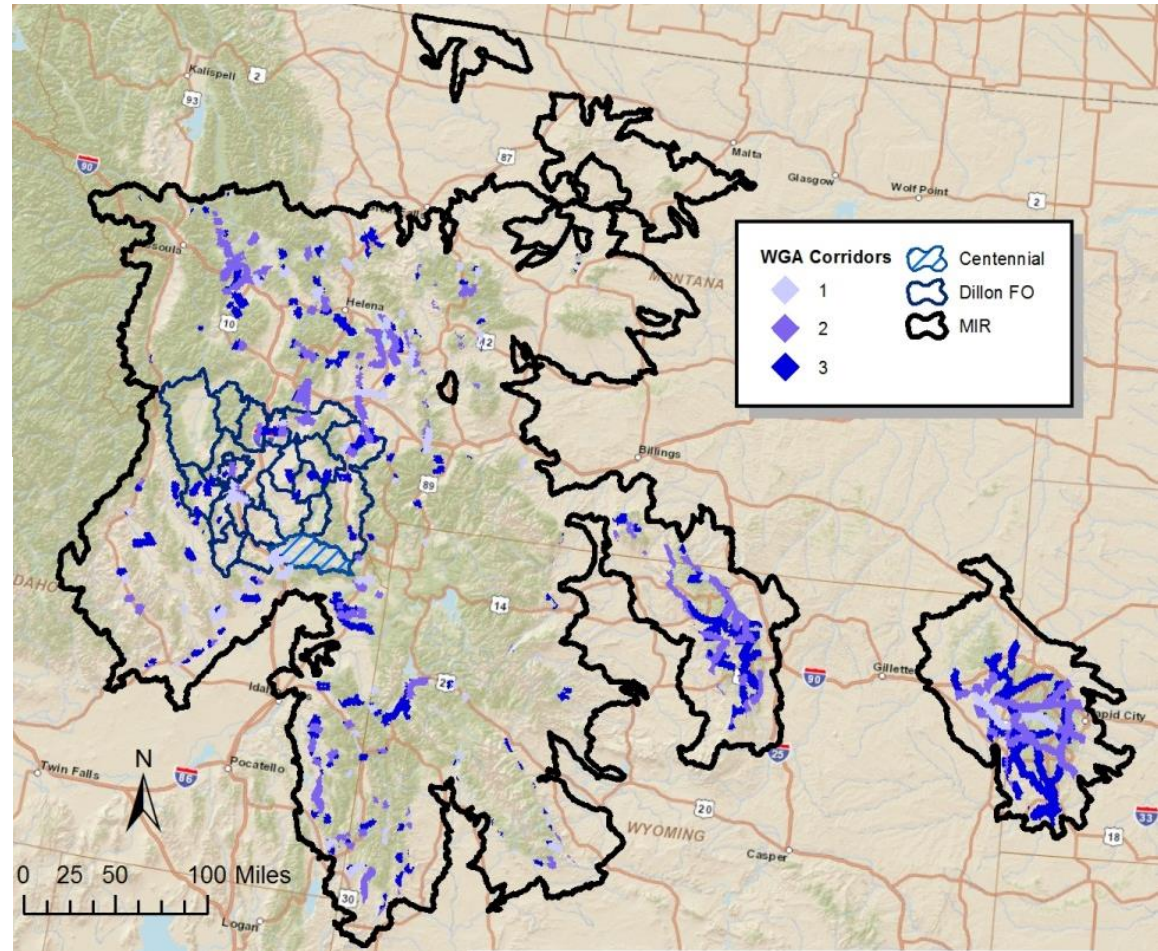

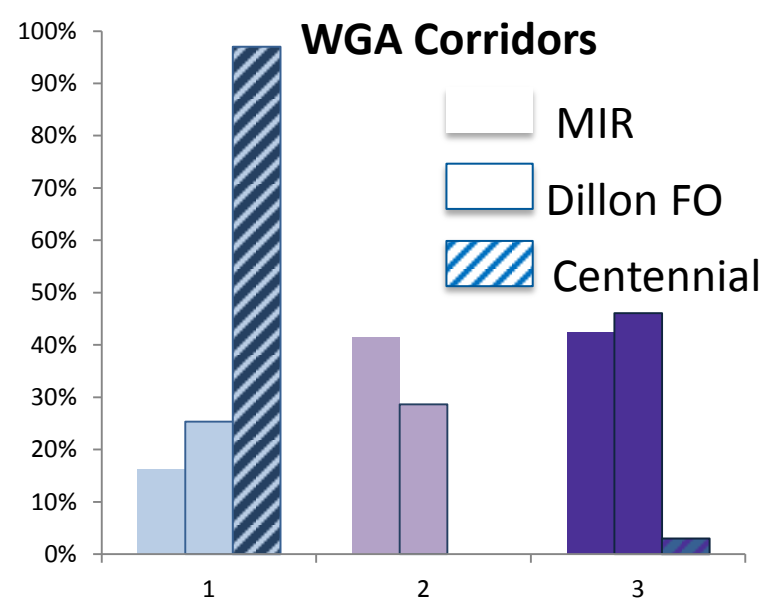

- Western Governors Association (WGA) Corridors
 - Represents linear landscape pathways identified using combined human uses/landscape conditions data sets as a cost surface
 - Connects 2 or more large intact blocks (LIB) or leads to one LIB
- American Wildlands U.S. Northern Rockies Corridors of Life (AWLCOL) Model
 - Assumes that animals would like to move through highest quality habitat
 - Habitat quality is based on Grizzly bear requirements

WGA Corridors

1 = high centrality, shortest distance, and highest landscape condition

• • •

3 = low centrality, long distance, and lowest landscape condition

AWL Corridors of Life
