

T/N-129

TECHNICAL NOTE

Filing Code 3812
Date Issued 11/25/69

Bureau of Land Management U.S. DEPARTMENT OF THE INTERIOR

Subject: Mining Law, Minerals subject to location, Gypsite

Reference: U. S. v. Bunkowski, Nevada Contests Nos. 062289-91,
August 4, 1969 (Director's Decision).

Data: Gypsite was distinguished as being a chemical as well as a physical amendment to soils. Gypsite reacts with alkaline soils to somewhat reduce alkalinity and there is an ion exchange and a change in the calcium and sodium ion ratio. Therefore, gypsite was considered to be locatable unlike such physical amendments as blow sand and decomposed granite.

Please send any additional references on this subject or other minerals subjects to DSC (D-310). If the complete article or publication is needed, DSC (D-310) will attempt to obtain a copy or a loan for you.
